Shoulder-yoke

I would like to present my "Shoulder-yoke" clothes hanger, produced from a recycled plastic. The prototype of the hanger is a shoulder-yoke, a vintage U-shaped wooden device for carrying heavy buckets of water from rivers or wells. The traditional yoke shape has been redesigned with the use of beveled edges and colorful materials. The hanger is quite capacious - jackets and other large clothes will not fall or be jammed. The hanger can be produced in different colors to match with the interior design, to separate different types of clothes, and for a variety of other purposes.

Source of plastic: bottle caps

Type of plastic: HDPE2

Other Materials Involved: No

Dimensions: 250gr / 440x210x20mm

Already in production?: No

Produced by: 99recycle

Video presentation of the project:

Did you participate in other contests with the same project?:

No
